Super premium food

Food inspired by wilderness

Whether you share your home with a giant dog or a tiny companion that fits in the palm of your hand, every dog still carries the wolf in its genes. And every predator—even a domestic one—deserves nutritious, great-tasting food with a high meat content and carefully selected beneficial ingredients. That is exactly what Ibero NATURAL offers.

Like its ancestor, the wolf, every dog thrives on a varied diet that meets its nutritional requirements and helps maintain optimal health and condition. Ibero NATURAL was inspired by the Iberian wolves that inhabit the Spanish Peninsula, where they primarily hunt semi-wild Iberian pigs, as well as sheep, deer, and other mammals. This natural feeding pattern inspired the modern nutritional philosophy behind Ibero NATURAL. These super-premium recipes are made exclusively from high-quality natural ingredients sourced from regional Spanish farms. Their main ingredient is premium Iberian pork, complemented by carefully selected lamb to provide exceptional flavour and balanced nutrition.

The story of the Iberian wolf

The Iberian wolf is a brown-coloured subspecies of the grey wolf that once inhabited the entire Iberian Peninsula. Today, its range is limited to northern Portugal and north-western Spain. The ancient Celts referred to it as the Spirit of the Storm. With a population of no more than 2,000 individuals, the Iberian wolf is considered one of the world's most endangered wild canids. Unlike many other wolf populations, Iberian wolves do not typically form large packs. They are mostly solitary, coming together in pairs only during the breeding season and while raising their pups. Renowned for their fierce and determined nature, Iberian wolves are often regarded as among the most aggressive wolf subspecies. Conflicts and fights over prey are common, even between a breeding male and female.

The story of Iberian pigs

You have probably already tasted the famous Spanish delicacy Jamón Ibérico. This premium cured ham is produced from the meat of the distinctive black Iberian pig. The same high-quality meat, naturally rich in protein, B vitamins, and essential minerals such as iron, zinc, and potassium, is the key ingredient in Ibero NATURAL recipes. Iberian pigs are raised in carefully managed free-range environments among Spain's oak and cork forests. With plenty of space to roam, they develop well-defined muscles and naturally lean meat. Their diet consists mainly of acorns, which are rich in heart-healthy unsaturated fatty acids. Because these beneficial fats are also found in olives, Iberian pigs are affectionately known by the locals as "olives on legs."

The story of the Iberian lynx

The Iberian lynx is one of the rarest wild cat species in the world. This elegant solitary predator, recognised by its short tail and distinctive tufted ears, once roamed across the Iberian Peninsula. Today, it survives only in a handful of protected areas in southern Spain. With fewer than 400 individuals remaining in the wild, the Iberian lynx has become a symbol of successful conservation. Its survival is remarkable, considering that its existence has long been threatened by habitat loss and the decline of wild rabbit populations—its primary source of prey. Often described as the shadow of the Mediterranean forests, the Iberian lynx is quiet, proud, and fiercely independent. To survive, it relies on the very best nature has to offer.
